# Trade-marks Journal

# Vol. 65 No. 3334

## General Information

The *Trade-marks Journal* is published every week in compliance with Rule 15 of the *Trade-marks Regulations*. The Registrar of Trade-marks cannot guarantee the accuracy of this publication, nor assume any responsibility for errors or omissions or the consequence of these. All mail relating to trademarks should be addressed to the Registrar of Trade-marks, 50 Victoria Street, Gatineau, Quebec, Canada, K1A 0C9.

## Electronic *Trade-marks Journal*

The *Trade-marks Journal* is available in electronic form on the CIPO web site (http://cipo.gc.ca). The *Journal* is available in PDF format and can be downloaded free of charge, viewed and printed with Adobe Acrobat Reader. The electronic form of the *Trade-marks Journal* is the official version.

The *Journal* is also available in a printable HTML format as an alternate official version, and contains a search function to narrow and customize the *Journal* content to user defined areas of interest.

## Official Languages

The *Journal* is available in English and in French. The application details are displayed based on the language of the application. If the language of the application is English, the goods, services, or other text and description appearing in the English version of the Journal are in the language filed by the applicant. If the language of the application is French, the goods, services, or other text and description appearing in the English version of the Journal have been translated. Any registration resulting from the application will be restricted to these goods or services described therein.

## Filing Dates

The filing date of each trademark application advertised in the *Trade-marks Journal*, including those to extend the statement of goods or services of an existing registration, is shown next to the application number in the sequence of Year, Month and Day.

## Nice Classification

The *Journal* includes reference to the Nice classification when the goods or services of an application have been grouped and classed by the applicant in accordance with the current version and edition of the Nice Classification.

## Opposition

Any person who has a valid ground of opposition (see section 38 of the *Trade-marks Act* for the grounds of opposition) to any application for registration of a trademark or to any application for registration of a trademark extending the statement of goods or services advertised in this *Trade-marks Journal* may file a statement of opposition with the Registrar of Trade-marks within two months from the date of issue of this publication. The prescribed fee must accompany the statement of opposition.

### Class 09

Apparatus and instruments for conducting, transforming, accumulating, regulating or controlling electricity, namely, electric conductors including wires, cables, rails, electric and electronic switches including semiconductor switches, breakers, electric transformers, electric accumulators including batteries, capacitors, electric regulators or controllers including voltage regulators, current regulators, frequency regulators, motor drives, industrial computers, programmable logic controllers; computer hardware and software for operating, controlling and monitoring wind turbines, wind parks, wind power substations, including power production and power transmission; electrical, electronic and computer equipment and software for wind turbines both onshore and offshore, namely computer equipment portable or stationary including data storages, data processors, human machine interfaces, graphical user interfaces, computer software for operating, controlling and monitoring wind turbines, wind parks, wind power substations, including power production and power transmission; programmable logic controllers (PLC); programmable logic controller (PLC) systems comprising I/O modules, utility grid measuring modules, voltage measuring modules, current measuring modules, power measuring modules, frequency measuring modules and power supply modules; electric control panels for electrical systems for wind turbines, namely, electric control panels and control modules located both in the wind turbine such as in blades, hub, nacelle, tower and outside the wind turbine; printed circuit boards (PCBs); electricity conduits; semi-conductors; electric meters namely electric meter, conductivity meter, and sensors for measuring electric values, including power, current, voltage, and for measuring grid events including voltage, all aspects of current, frequency, fault and vibration, acceleration, speed, orientation and location related to wind turbine control and meteorological values, including temperature, wind speed, ice, sun, shadow, air particles both in and outside the wind turbine and geographical values, including position, location above sea level for individual wind turbines both stand alone and in a wind park; electric power converters and inverters for handling power output from a generator and ensuring compliance with relevant grid codes; general purpose batteries, solar batteries and uninterruptible power supplies; computer hardware and software for controlling hydraulic, electric and mechanical pitch and yaw systems for wind turbines; application software for computers, mobile phones and tablet computers for the monitoring and operation of wind turbines and wind parks; climate control systems for wind turbines consisting of thermometers, air conditioning, ventilation, heat and humidity control devices; smoke, fire and combustible, flammable and toxic gas detectors; security systems for wind turbines comprising sensors including sensors for measuring power, temperature, speed, vibrations, accelerations and wind turbine controller facilitating control of the wind turbine according to design limits, thereby preventing fire, overheating, overload, overspeed, for facilitating optimum start and stop of rotor rotation and power production, for facilitating periodic movement of components to enable lubrication and correct temperature, preventing unintended loads of the wind turbine and parts hereof and for deicing of blades; safety systems for wind turbines comprising loop of safety switches connected to a safety controller used for emergency stop of the wind turbine; lightning protection systems for wind turbines comprising lightning down conductors, lightning arresters and lightning receptors; apparatus for overvoltage protection against strokes of lightning, namely, lightning arrester equipment condition monitoring systems comprising computer hardware and software for monitoring specified conditions; surveillance management and predictive maintenance systems for wind turbines and wind parks comprising data collecting systems and data analyzing systems for extracting wind turbine health and performance data to maximize availability and output; connecting parts for electric conductors, namely, aerials, electrical transformers, power conductors in the nature of electric conductors, electric cables, all kinds of electrical circuit breakers, ammeters, electroacoustic transducers, electric controllers for wind turbines, electric control panels for wind turbines, storage devices for electrical power, namely, batteries, capacitors, accumulators, and condensers, all of the foregoing goods for assembling and operating wind turbines and wind parks and for connecting wind turbines and wind parks to the power grid, and for managing wind turbines and wind parks; electric control and monitoring devices for wind turbines for automatically turning on or off power production and for complying with grid codes such as those relating to low voltage ride through requirements and the like after and during utility grid failures; microprocessors, semiconductors and programmable logic controllers (PLC) for controlling and monitoring constant voltage, frequency, phase conditions, rotor speed, temperature, wind direction and wind speed, pitch of wind turbine blades and yaw of wind turbine nacelle; Electric sensors, namely, vibration, audio and visual sensors for installation in wind turbines for monitoring of nacelle, hub, tower, rotor; electric transducers for converting information from analog to digital and from digital to analog including encoders; electric transducers for converting data from analog to digital and from digital to analog including antennas; wind turbine control systems comprising electronic sensors and related software for controlling and optimising wind turbine performance, including operation at low costs and maximum output, integration with other wind turbine systems, maximum availability of the wind turbine such as wind turbine control systems; computer hardware and software for use in monitoring and control of wind turbines and wind parks, including for remote monitoring and control; control and monitoring computer hardware and software for controlling and monitoring wind turbines in power producing mode and in non-power producing mode; control and monitoring computer hardware and software for acquiring and storage of statistical and operational data related to a wind turbine, a wind park and surroundings of the aforesaid; SCADA (Supervisory Control and Data Acquisition) systems including SCADA systems comprising data processor and graphical user interface for collection, storage, display, transport and intelligent processing and presentation of relevant statistical and operational data from wind turbines and wind parks, including control and monitoring via human machine interface or graphical user interface and for preparation of reports and communication and for exchange of data with external computers or units such as weather stations, ether monitoring systems or electrical grids; electric and electronic monitoring, control and operating apparatus and equipment, namely, equipment in the nature of transducers, weather or electric sensors, accelerometers, collecting and transmission of statistical and operational data for use in remote monitoring and operation of wind turbines, utility grid and parts and fittings for the above types of velocity sensors, converters, measuring equipment in the nature of transducers, weather sensors, electric sensors and accelerometers; computer hardware and software for transmitting, analyzing, collecting, calculating and processing statistical and operational wind data and statistical and operational data from wind turbines and wind parks and wired or wireless electronic communications networks also including radio and fibre optic communication for the aforesaid; electrical, electronic and computer equipment for wind turbines, namely, wind turbine controllers, pitch and yaw controllers, I/O modules for wind turbine controllers developed to upgrade existing electrical, electronic and computer equipment for wind turbines; computer hardware and software and hardware and software platforms including modular platforms all for enhancing the performance of wind turbines as well as enabling integration with all types of wind turbines

## SERVICES
